React Developer | Front-End Developer

Summary

I am looking for a Front-End / React Developer position. Would like to work with technologies such as: Mobx, Typescript, Javascript ES6, HTML5 and CSS3. As well, I have solid knowledge of responsive layout, semantics, performance and optimization (SEO).

Considering myself eager to learn, I feel excited in observe my team developers and the ones from others teams, and get the best from them in order to improve my skill. I am always looking forward to use new techniques.

In all my career, the project that I am most proud of was to create a system from scratch that makes analysis of social media profiles in the main plataforms (Facebook, Instagram and Twitter) and indicates what kind of content is being done right and wrong, what the audience is thinking, what is the conversion rate, making the team contact the client to improve and approve the new contents.

Area of Expertise

- Front-End Development
- Responsive layout
- SEO performance
- Strategic Planning

Professional Experience

Jul 2018 - Jan 2019 Front-End React Developer

FitDance

FitDance is a well known dance company from Brazil, that started to bring their dance instructor course to other countries in order to become a multinational dance course.

The main goal of the project was to create a new system that was a mix of ERP and CRM systems, that would be able to manage all the steps to create a course and keep the instructor interested to pay the subscription: open new classes, receiving payments in any country, creating and displaying new content for the instructors and so on.

Technologies used: React, Mobx, Typescript, Javascript (ES6), Sass, Material UI, HTML5, CSS3.

Main responsibilities:

- Create responsive user interfaces according to UX/UI experience created by the designer
- Decide together the back-end developer how to procede to solve the tasks
- Participate actively in the meetings with the stackholders and P.O
- In the last two months of project, leading the team through the sprint to make better tasks deliveries

Apr 2018 - Jun 2018 Full Stack Developer

Unijorge

Unijorge is a college that is one of the most popular in Bahia - Brazil and it is part of Ilumno company.

The main goal of the project was to develop and maintain websites and landing pages, that were used as tools to get more students to enroll at the college

Technologies used: HTML5, CSS3, LESS, Javascript, PHP, REST API's.

Main responsibilities:

- Creating responsive web pages for students being able to access from any mobile gadget
- Development of communications between front-end and back-end by using REST API with PHP
- Creating and managing small databases to be used by the marketing to get in contact with new prospect students

Sep 2014 - Mar 2018
